Balanced Academic Curriculum Problem

Genetic Algorithm & Simulated Annealing + Greedy

Felipe Carmona

Juan Pablo Escalona

Balanced Academic Curriculum Problem

m: 24

A 3x8 grid of green boxes, each containing a ratio. Three blue curved arrows connect boxes across rows: from 1:2 to 5:2, from 10:4 to 14:2, and from 21:4 to 24:2.

Variables y
espacios de
búsqueda

Representación

AG

Representación de una matriz

$$x_{ij} = \begin{cases} 1 & \text{si ramo } i \text{ es asignado al periodo } j \\ 0 & \text{en otro caso} \end{cases}$$

$$\forall i \in \{1, \dots, m\}, j \in \{1, \dots, n\}$$

Espacio de búsqueda

$$2^{nm}$$

SA + Greedy

Representación en un arreglo

x_i : periodo del ramo i

$$\forall i \in \{1, \dots, m\}, x_i \in \{1, \dots, n\}$$

Espacio de búsqueda:

$$n^m$$

AG

SA + Greedy

backp8

$n = 8m = 46$

$$2^{nm} = 2^{368}$$

$$n^m = 8^{46} = 2^{138}$$

AG

SA + Greedy

backp10

$n = 10m = 42$

$$2^{nm} = 2^{420}$$

$$n^m = 10^{42} \approx 2^{139.524}$$

AG

SA + Greedy

backp12

$n = 12, m = 66$

$$2^{nm} = 2^{792}$$

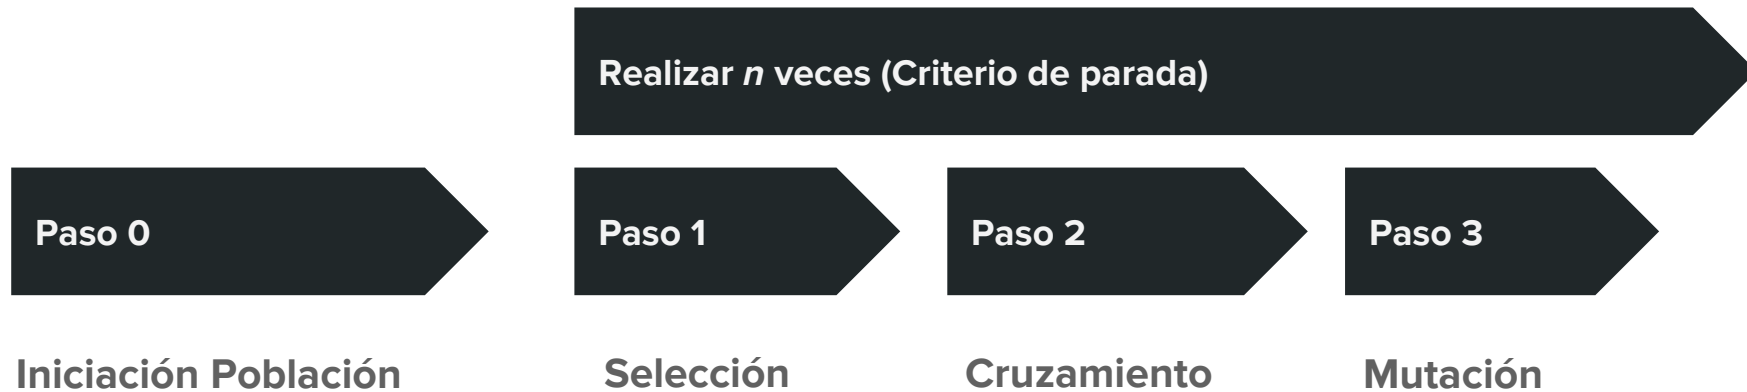

$$n^m = 12^{66} \approx 2^{236.608}$$

Algoritmos

AG

SA + Greedy

A close-up photograph of a person's hand, wearing a dark blue sleeve, adjusting a white slider on a professional audio mixing console. The hand is positioned in the lower-left quadrant of the frame. The mixing console has various faders and knobs, with some red-tipped sliders visible on the right side. The background is out of focus, showing several bright, circular bokeh lights in shades of green and yellow, suggesting a stage or concert environment. A thin, vertical green line is positioned to the left of the word 'Experimentos'.

Experimentos

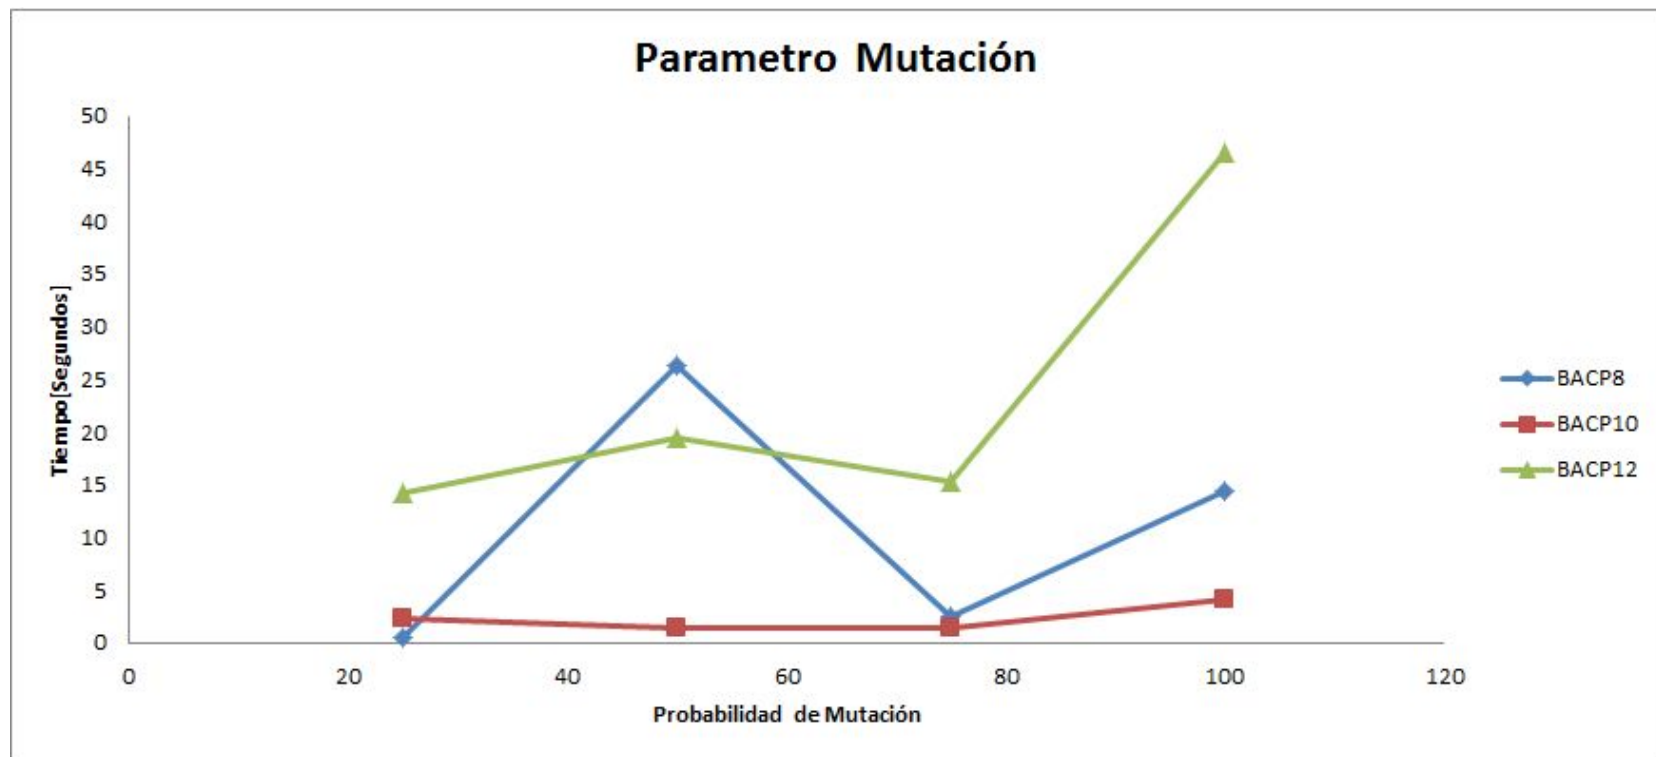

AG

- Función de evaluación / Criterio de parada
- Tamaño de población
- Probabilidad de cruzamiento
- Probabilidad de mutación

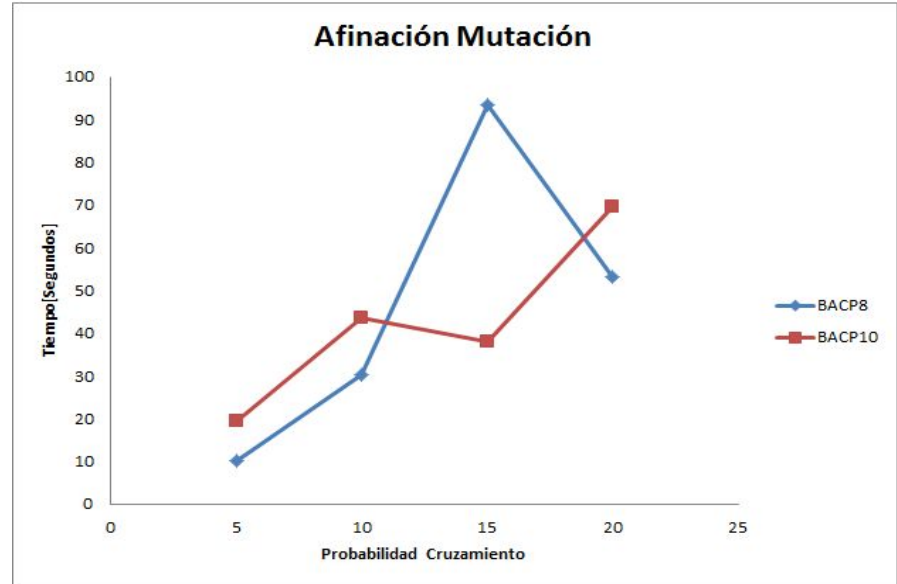

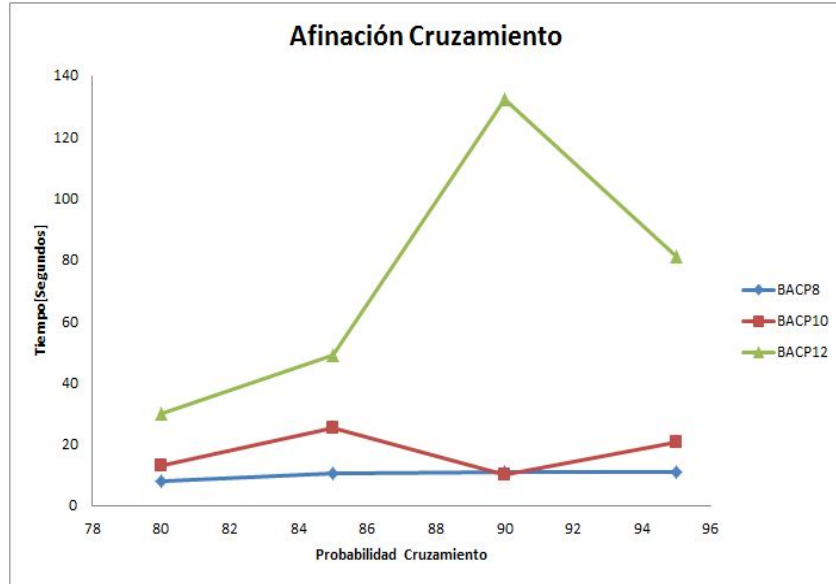

Variación Parámetros

Variación Parámetros

Refinación de parámetros

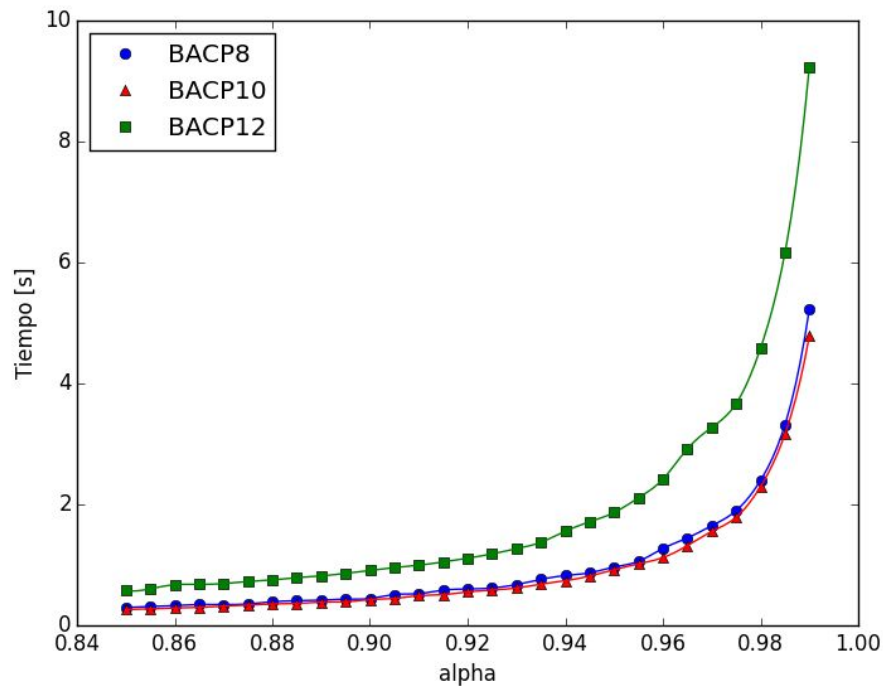

SA + Greedy

- Tasa de disminución de la temperatura (α)
- Número de iteraciones locales (n_iters)
- Temperatura mínima (t_min)

Exactitud variando alpha

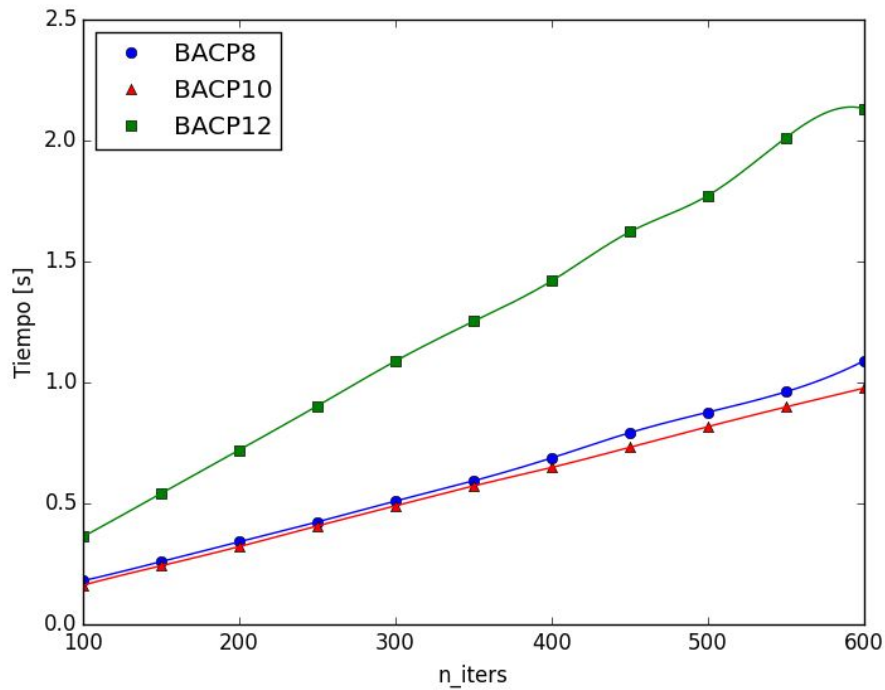

Tiempo variando alpha

Exactitud variando n_iters

Tiempo variando n_iters

Exactitud variando t_{\min}

Tiempo variando t_{\min}

Resultados

Resultados SA + Greedy

| Instancia | Tiempo Promedio | Carga Promedio | Exactitud |
|-----------|-----------------|-------------------|------------|
| bacp8 | 0.4413 [s] | 17.0000 [crédito] | 100.0000 % |
| bacp10 | 0.4064 [s] | 14.0500 [crédito] | 99.6441 % |
| bacp12 | 0.9057 [s] | 18.0000 [crédito] | 100.0000 % |

Valores promedios de SA + Greedy sobre bacp8, bacp10 y bacp12 luego de 100 repeticiones

Resultados AG

| Instancia | Tiempo Promedio | Carga Promedio | Exactitud |
|-----------|-----------------|-----------------|-----------|
| bacp8 | 29.24 [s] | 19.35 [crédito] | 87.8553 % |
| bacp10 | 118.89 [s] | 18.35 [crédito] | 76.2943 % |
| bacp12 | 204.06 [s] | 19.9 [crédito] | 90.4522 % |

Valores promedios de AG sobre bacp8, bacp10 y bacp12 luego de 15 repeticiones

Conclusiones

El Espacio de búsqueda

Los resultados dependen mucho de la representación y el espacio de búsqueda

Dificultad Algoritmo

La complejidad de un algoritmo no determina el hecho de encontrar mejores o peores soluciones

Algoritmo adecuado

Simulated Annealing + greedy es más rápido y eficiente al encontrar soluciones buenas
